LAGOS STATE ELECTRICITY REGULATORY COMMISSION
13 JAN 2026
LASERC
Sign:

The Chairman,
Lagos State Electricity Regulatory Commission
Block B Lagos Revenue House, Assbifi Rd,
Alausa, Lagos 101233, Lagos

Dear Sir,

**APPEAL FOR URGENT INTERVENTION ON THE PROLONGED POWER CRISIS AFFECTING ERUNWEN FEEDER AND OTHER COMMUNITIES ON SABO INJECTION STATION**

We write to you today as representatives of the **Ikorodu Electricity Users Forum** to bring to your official attention a critical power crisis that has reached a breaking point. While the Lagos State Government continues to champion initiatives for reliable and sustainable electricity, the persistent neglect and unwillingness of Ikeja Electric (IE) to maintain and upgrade its infrastructure is making population growth in our communities appear to be a disadvantage rather than a catalyst for development.

The situation across the Erunwen Feeder and other communities attached to the Sabo Injection Station is dire. We wish to highlight the following salient points::

- **Unfulfilled Promises Since 2019:** For over six years, Ikeja Electric has made repeated commitments to construct a relief injection station at LASPOTECH to alleviate the heavy burden on the Sabo Injection Station. Despite these long-standing assurances, no progress has been made.

- **Idle 15MVA Transformer:** During meetings with IE Senior Management at their Alausa headquarters, we learned that a 15MVA relief power transformer, provided by the Central Bank of Nigeria (CBN) specifically to improve this situation, is currently lying idle at IE's headquarters. We understand this delay is due to IE's failure to fulfill requirements for the land needed for the project.

- **Severe Load Shedding and Poor Supply:** Over five transformers servicing more than 20,000 households on the Erunwen Feeder are subjected to a grueling "One Day On, One Day Off" load-shedding program. Combined with general feeder instability, communities such as Erunwen Balogun, Ajayi Oronti, Erunwen 1, and Oremolu frequently receive less than 2 hours of power daily.

- **Technical Failures and Community Self-Funding:** Residents suffer from incessant low voltage and "phase loss." In desperation, communities are forced to contribute personal funds to replace faulty parts and purchase fuse wires—responsibilities that legally and contractually rest with Ikeja Electric.

- **Insecurity and Vandalism:** This chronic darkness has been identified as a primary driver of insecurity and the increasing rate of transformer vandalism within our communities.

- **Exhausted Avenues for Dialogue:** We have engaged multiple stakeholders to no avail. We formally sought the intervention of His Royal Majesty, Oba Kabiru A. Shotobi, the Ayangburen of Ikorodu (Sept 8, 2025), and held meetings with IE leadership and the Ikorodu North CDC (May 21, 2025), yet our plight remains ignored.

Sir, residents are being billed for services they do not receive. Many communities attached to the Sabo Injection Station remain under "Band C" classifications despite living in near-total darkness. This lack of stable power is stifling the economic potential of Ikorodu..

We humbly seek the intervention of the Commission to compel Ikeja Electric to deploy the idle 15MVA transformer and fulfill their 2019 promise of a relief injection station. Attached are copies of our previous correspondences on this subject.

We are available to discuss this issue further at your earliest convenience.

Ikorodu Electricity Users Forum

Yours sincerely,
